End User License Agreement (for non-institutional, personal use)

This is an agreement between you and Bentham Science Publishers Ltd. Please read this License Agreement carefully before using the ebook/echapter/ejournal ("Work"). Your use of the Work constitutes your agreement to the terms and conditions set forth in this License Agreement. If you do not agree to these terms and conditions then you should not use the Work.

Bentham Science Publishers agrees to grant you a non-exclusive, non-transferable limited license to use the Work subject to and in accordance with the following terms and conditions. This License Agreement is for non-library, personal use only. For a library / institutional / multi user license in respect of the Work, please contact: permission@benthamscience.net.

Usage Rules:

- 1. All rights reserved: The Work is the subject of copyright and Bentham Science Publishers either owns the Work (and the copyright in it) or is licensed to distribute the Work. You shall not copy, reproduce, modify, remove, delete, augment, add to, publish, transmit, sell, resell, create derivative works from, or in any way exploit the Work or make the Work available for others to do any of the same, in any form or by any means, in whole or in part, in each case without the prior written permission of Bentham Science Publishers, unless stated otherwise in this License Agreement.
- 2. You may download a copy of the Work on one occasion to one personal computer (including tablet, laptop, desktop, or other such devices). You may make one back-up copy of the Work to avoid losing it.
- 3. The unauthorised use or distribution of copyrighted or other proprietary content is illegal and could subject you to liability for substantial money damages. You will be liable for any damage resulting from your misuse of the Work or any violation of this License Agreement, including any infringement by you of copyrights or proprietary rights.

Disclaimer:

Bentham Science Publishers does not guarantee that the information in the Work is error-free, or warrant that it will meet your requirements or that access to the Work will be uninterrupted or error-free. The Work is provided "as is" without warranty of any kind, either express or implied or statutory, including, without limitation, implied warranties of merchantability and fitness for a particular purpose. The entire risk as to the results and performance of the Work is assumed by you. No responsibility is assumed by Bentham Science Publishers, its staff, editors and/or authors for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products instruction, advertisements or ideas contained in the Work.

Limitation of Liability:

In no event will Bentham Science Publishers, its staff, editors and/or authors, be liable for any damages, including, without limitation, special, incidental and/or consequential damages and/or damages for lost data and/or profits arising out of (whether directly or indirectly) the use or inability to use the Work. The entire liability of Bentham Science Publishers shall be limited to the amount actually paid by you for the Work.

General:

- 1. Any dispute or claim arising out of or in connection with this License Agreement or the Work (including non-contractual disputes or claims) will be governed by and construed in accordance with the laws of Singapore. Each party agrees that the courts of the state of Singapore shall have exclusive jurisdiction to settle any dispute or claim arising out of or in connection with this License Agreement or the Work (including non-contractual disputes or claims).
- 2. Your rights under this License Agreement will automatically terminate without notice and without the

- need for a court order if at any point you breach any terms of this License Agreement. In no event will any delay or failure by Bentham Science Publishers in enforcing your compliance with this License Agreement constitute a waiver of any of its rights.
- 3. You acknowledge that you have read this License Agreement, and agree to be bound by its terms and conditions. To the extent that any other terms and conditions presented on any website of Bentham Science Publishers conflict with, or are inconsistent with, the terms and conditions set out in this License Agreement, you acknowledge that the terms and conditions set out in this License Agreement shall prevail.

PREFACE

"My intentions are to spread knowledge; I consider this the most important happiness."

Biruni, a Persian encyclopedic scientist (973 – after 1050)

The above sentences from Biruni describe the main reason for writing this textbook. It is a great pleasure to contribute to the advancement of science and the standards of care by sharing knowledge and unique experiences with colleagues.

In PART 1, we dealt with teaching, medical, and publication pearls. In the second part, we present procedural and business pearls. Some procedures mentioned in this textbook, such as the removal of glomus tumor, can hardly be found elsewhere. In fact, a strong point of this book is the presentation of novel tips that cannot be found or hardly can be found in other publications.

Fortunately, I have been successful and honored to receive the contributions of some world leaders in aesthetic procedures, such as Joe Niamtu and Samuel Lam, for the procedural part of this book.

A unique feature of this textbook is the inclusion of business pearls. Unluckily, business issues, while important, are not included in the dermatology curriculum. The result is that many expert dermatologists end up working in clinics belonging to businessmen.

Importantly, this book does not aim to provide detailed information on each topic, rather it is aims to provide interesting tips which cannot be found or can hardly be found elsewhere. Therefore, as an advanced dermatology textbook, many important essential information which can easily be obtained from other publications is not included in this book.

I would like to thank all my dear colleagues who have kindly referred surgical patients to me, especially Drs. Namiyan, Kalafi, Naseri, Koraee, Moradi, Abtahiyan, Khosravi, Abbaspour, Mehrabadi, Fereydounpour, Hamedpour, and other colleagues whom I may not remember.

I would also like to thank my assistants, Mr. Mohammad Khanchefalak and Ms. Bahar Bayat, for their help in taking photos.

This preface cannot be concluded without sincerely thanking Bentham's publishing staff for their help in making the dream of this book a reality.

I hope the readers find this book interesting.

DEDICATION

To Drs. Uranus Dasmeh, Aliakbar Mohammadi, Vahid Dastgerdi, plastic surgeons in Shiraz, Iran, and Dr. Mohsen Alirezai, dermatologist and plastic surgeon in Montpellier, France, for responding to my consultations and queries; and Dr. Behrooz Kasraee for his help

To all my dear colleagues who have kindly referred surgical patients to me

To my dear wife Masoumeh, who got headaches on weekends from the constant sound of typing this book from dawn to dusk, and our beloved flowers Sahand and Anahid

Video Contents and Transcripts

Video 67.1: Filler Injection into the Nasolabial Fold (Namazi's Technique)

Mohammad Reza Namazi

Infra-orbital nerve block and cleansing the site with alcohol are already performed. The cannula is inserted immediately under the skin with the hole on its tip facing the dermis. Aspiration may be done prior to the injection. The filler is injected while the syringe is rotated along its axis and simultaneously pulled back slowly. The area is massaged for having a uniform filler placement.

Video 68.1: Non-surgical Jawline Augmentation

Kay Durairaj

No transcript is provided for this video.

Video 80.1: How to Place a Buried Horizontal Mattress Suture?

Mohammad Reza Namazi

The needle is entered into the subcutaneous fat beneath the dermis and then into the dermis from its undersurface and is directed towards the skin surface. Therefore, the path of the needle movement is vertical to the skin surface, not horizontal to it. When the needle tip is felt under the skin surface, the direction of the needle movement is changed and the needle is moved away from the skin surface to exit from the undersurface of the dermis and the subcutaneous fat. The same is repeated in the other side. Finally, the knot is tied. If the wound is under tension, you can avoid tying the knot after completing the stitch and repeat the same procedure at the same place to make a second stitch and then proceed with tying the knot.

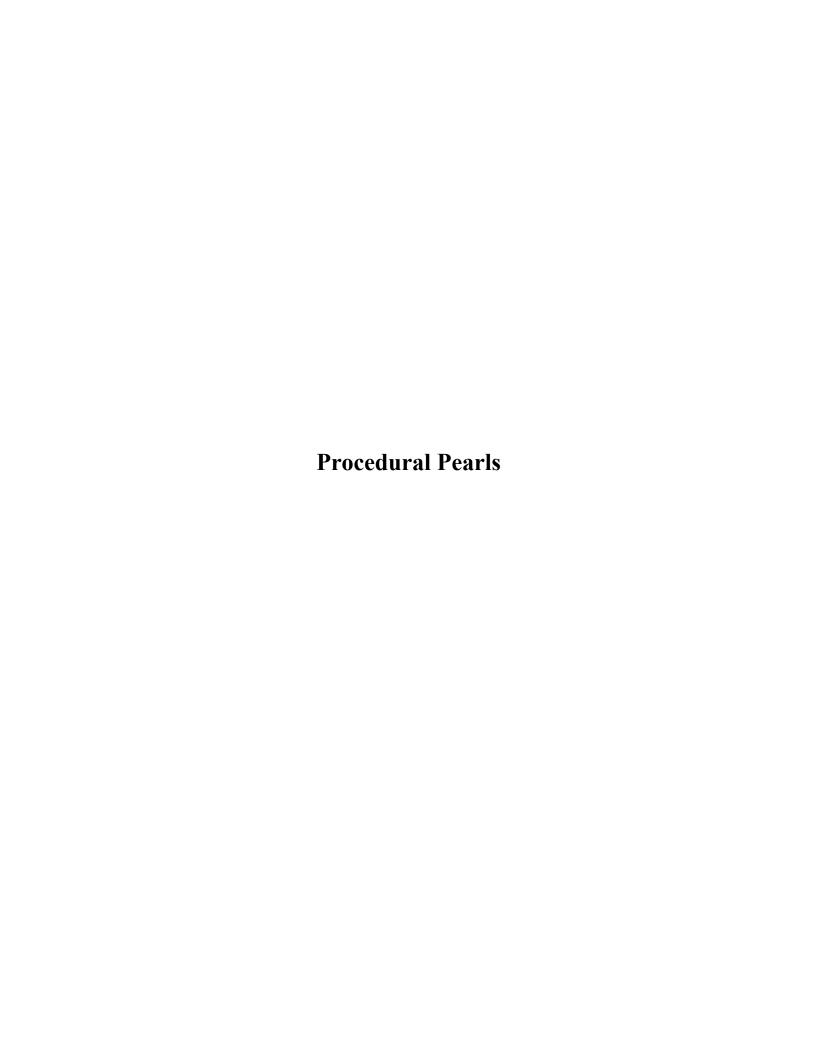

Video 81.1: How to Tie a Sliding Knot?

Mohammad Reza Namazi

Sliding knot is used whenever there is tension in wound closure. The technique for tying a sliding knot is shown in this video for a buried horizontal mattress stitch, but it can be used with any other type of stitch. It is especially very useful for a purse-string stitch. The technique is very simple: Do not fasten the initial two throws; put them loosely. Then, place the thumb and the index finger of your non-dominant hand on the initial two throws and with your dominant hand pull the short end of the thread. Finally, put the third throw to complete the knot.

Video 81.2: How to Place a Subcuticular Continuous Suture?

Mohammad Reza Namazi and Mohammad Khanchefalak

CHAPTER 1

How to Prevent Lawsuits and Complaints?

Mohammad Reza Namazi^{1,*}

¹ Shiraz University of Medical Sciences and Dr. Namazi Skin and Hair Clinic, Shiraz, Iran

More than 95% of physicians react to lawsuits by experiencing periods of emotional distress. An internist mentioned awakening with his first episode of atrial fibrillation after being served with his first malpractice suit the previous afternoon [1].

-There is a nice aphorism from Avicenna, the Prince and Chief of Physicians, which says: "The physician should have the heart of a lion and the cautiousness of a snake". Keep in mind that the symbol of medicine is a snake wrapped around a stick. Snake is the symbol of cautiousness in some ancient stories, as its eyes are always open (it does not have any eyelids), seeming to be hypervigilant (Fig. 1).

Richard Smith, the editor of The *British Medical Journal* until 2004 says: "Good surgeons know how to operate, better surgeons when to operate, and the best surgeons when not to operate. This applies, I think, across all of medicine."

-While bravery is a virtue for a surgeon, foolhardiness and incautiousness are definitely vices. Being unwatchful to the patients with personality problems and proceeding with cosmetic interventions for them will damage your credit and fame and ruin your life. Life is too short to be spent for satisfying a moaning irrational patient or going to the court for answering his/her litigation. Saadi Shirazi, one of the eminent Persian poets, whose poem adorns the UN building in New York, wisely advises others metaphorically to be careful while dealing with people:

"Think not that every grove is empty. A tiger may be lying there..."

CHAPTER 2

Laser Hair Removal: Pearls

Mohammad Reza Namazi^{1,*}

¹ Shiraz University of Medical Sciences and Dr. Namazi Skin and Hair Clinic, Shiraz, Iran

In laser hair removal, a light is emitted which is absorbed by hair melanin. The light energy is transformed to heat, which injures the hair follicles, inhibiting or delaying ongoing hair growth.

- Vellus hair is resistant to laser hair removal because of the lack of melanin. Overall, facial hair is lighter and finer in comparison to the body hair, so being more difficult to treat.
- There is no specific lower age limit for laser hair removal. However, it is imperative to refrain from lasering the vellus hair to avoid the paradoxical growth of hair on the face.
- The desired endpoint of lasering is perifollicular edema and redness, which develop within a few minutes.
- It is necessary to emphasize that lasering causes permanent hair reduction, not removal. Maintenance treatments are needed, which vary from case to case from 3 to 4 times yearly.
- Patients with polycystic ovary syndrome need more frequent treatments (around 10 to 15 sessions).
- A fortnight wait prior to lasering is required for burnt or sun tanned patients.
- When lasering the face, application of ice on the nearby areas limits heat dissipation, which can cause paradoxical hair growth.
- The damaged hair shafts on the face are normally fallen in the first week of treatment. Assurance should be given that this is not a new hair growth [1].

^{*} Corresponding author Mohammad Reza Namazi: Shiraz University of Medical Sciences and Dr. Namazi Skin and Hair Clinic, Shiraz, Iran; E-mail: rezanamazi12@yahoo.com

CHAPTER 3

Laser Vaginal Tightening

Mohammad Reza Namazi^{1,*}

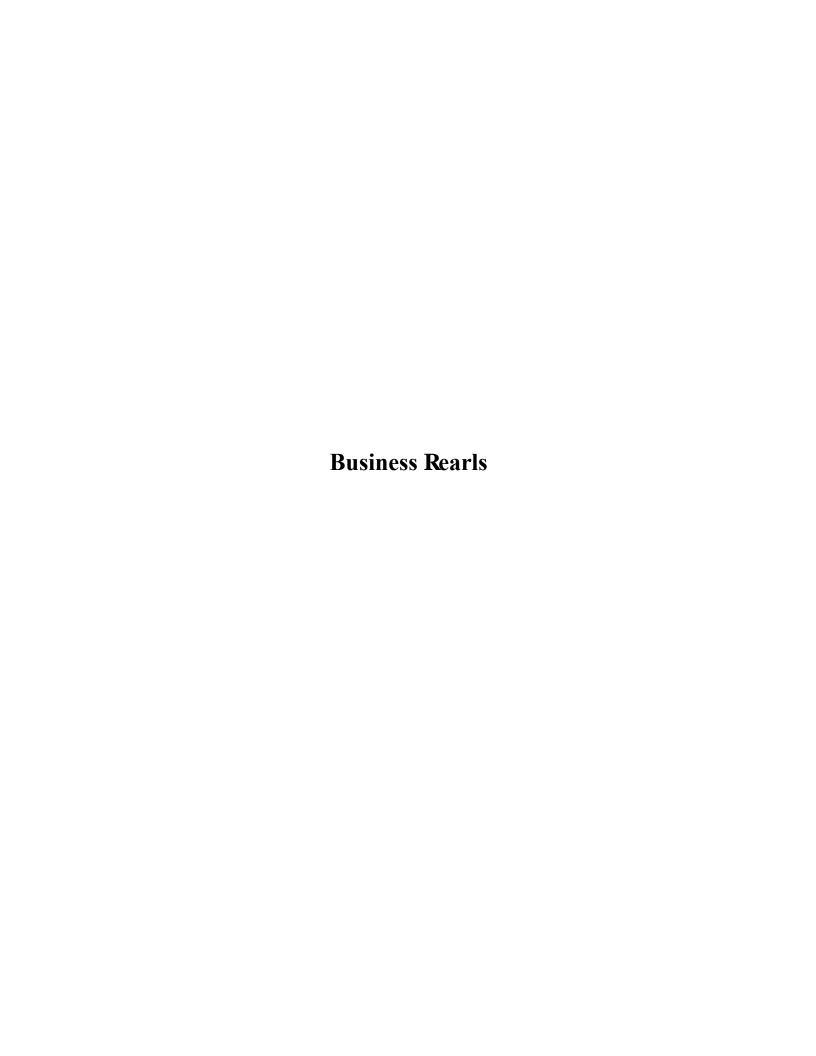

¹ Shiraz University of Medical Sciences and Dr. Namazi Skin and Hair Clinic, Shiraz, Iran

Dermatologists are frequently pained by other physicians trespassing their territory, esp. in cosmetic dermatology. Unfortunately, their endeavor to prevent this problem has been largely futile. Dermatology should expand its field by including some simple procedures such as laser vaginal tightening and G-spot enhancement which will be discussed later.

The loss of vaginal tone after pregnancies causes the decrease in the friction on the anterior vaginal wall during sex, decreasing female sexual pleasure. This is the reason for seeking vaginal tightening.

- Refer the patient to a gynecologist if you see any anterior or posterior vaginal prolapse while the patient is pushing in lithotomy position. Also, note that vaginal tightening can improve stress in continence but cannot treat it.
- -Co₂, erbium, and diode lasers can be used for vaginal tightening (special vaginal handpieces are used) (Fig. 1).
- -There are too few studies to support the approval of laser vaginal tightening by FDA, which has issued a warning on it.
- Lasers can improve mucosal quality and increase vascularization and collagen deposition which thickens vaginal walls.
- -Anesthesia is not needed. In lithotomy position, dry the vaginal wall with gauze. Introduce the handpiece. Rotate it while moving out slowly, without leaving the handpiece still at any time. One to three passes can be done in each session. For better results, three or more sessions spaced 4-8 weeks apart are needed. No ointments or medications are applied after treatment. The patient can resume sex three days after the procedure [1].

How Do You Sadly Lose your Cosmetic Patient Very Easily

Mohammad Reza Namazi^{1,*}

¹ Shiraz University of Medical Sciences and Dr. Namazi Skin and Hair Clinic, Shiraz, Iran

You frequently encounter patients who ask about the costs of several cosmetic procedures or their total cost after receiving consultation about these procedures. For example, after being consulted about Botox injection for the forehead wrinkles, filler injection for deep nasolabial folds, and blepharoplasty for dermatochalasis, a female client may ask: "Ok, doctor, what would be the total cost of all these procedures?" An answer which can frequently disappoint her, esp. if not well-off, to pursuit these procedures is to tell her the total cost, which would hardly be affordable for the people from the middle class of any society! Instead, you can say: "It is better to think about these procedures step by step, rather than thinking about all of them now. First, we start with Botox injection and then we think about proceeding with others. After Botox, your face will look younger and you may not need the other procedures You are not telling a lie, you are right and frequently this occurs. This diplomatic response is not disappointing and even encourages her to get her cosmetic stuff done by you!

The 80/20 Rule and Its Practical Implications

Mohammad Reza Namazi^{1,*}

¹ Shiraz University of Medical Sciences and Dr. Namazi Skin and Hair Clinic, Shiraz, Iran

The Pareto principle or the 80-20 rule maintains that 20% of the effort, or input, brings about 80% of the results or output (Fig. 1). This principle advises us to focus on the few key items and disregard many insignificant ones. Basically, if we allocate a limited time to what holds true significance, we can expect more fruitful outcomes rather than indulging in an abundance of tasks.

You increase your profit by dismissing the activities that are unimportant but consume a large amount of your time. The Pareto principle can be utilized in numerous aspects of life, such as business, relationships, learning, and marketing, *etc.*

Fig. (1). The Pareto principle.

How to Save Your Clinic in the Business Storms?

Mohammad Zohrevand^{1,*}

¹ Sehat Gostar Sadra Co. Ltd, Tehran, Iran

Your clinic is like a ship. If you do not prepare yourself for the storms of your business, you'll sink, even if your ship is as big as Titanic.

Imagine that the hull of your ship is made up of 9 building blocks and your ship needs 3 sails and 1 engine to move. In this chapter, we will review the 9 key building blocks, 3 sails, and 1 engine of your clinic.

THE NINE BUILDING BLOCKS

The nine building blocks discussed in this chapter are taken from The Business Model Canvas which was invented by Alexander Osterwalder and presented in the Business Model Generation book for the first time [1].

1- Customer segments

- Find out what other clinics are operating in the same area as yours. Then find out which customer segments your competitors most neglect. See if it is feasible for you to better meet the needs of those patients. There may be a special segment in your area the focus on which can distinguish you from your competitors.
- Find out the 20 percent of patients who brought you the most income during the last year. Analyze and see if you can find a common characteristic among them. Then, see if you can do something to attract more patients like them.

2- Value propositions

Find out which one of the following values your clinic offers to patients and in which case can you improve them:
